

# Neha Sanku

**B.S. in Computer Science & Engineering (2022)**  
**Cardinal Health, Dublin, OH**

## **Describe your overall duties/responsibilities as a Senior Analyst:**

I am currently working on a few projects. Some of the technologies I use include infrastructure-as-tools software and data visualizations platforms. I am also learning about monitoring tools!

## **Explain the skills/abilities that are required for being successful in your role:**

I think an important skill to have is to be organized. Using a note-taking app on your computer is a simple way to keep track of details. For people that are remote, I think taking opportunities that are in-person are great to build relationships.

## **What advice would you give to students who are considering majoring in Computer Science & Engineering?**

I would advise students to make friends with other people in the field. It's very beneficial to have different insights into what they're interested in and what options there are that you may not have considered. I would also recommend going to the TA's office hours because they tend to have more time than the professor. Also apply to internships early!
