

# Andrew Min

**B.S. in Industrial & Systems Engineering (2016)  
Amazon, Seattle, WA**

## **Describe your overall duties/ responsibilities a Sr. Instock Manager:**

In my current role as a Sr. Instock Manager for Amazon Fresh, I am responsible for ensuring we have the best selection, prices and in stock rates for our customers.

## **Explain the skills/abilities that are required for being successful in your role:**

To be successful in my position, first and foremost, you need to be customer obsessed. Starting from the customer and working backwards is key to understanding how selection, pricing, and in stock rates are impacting the customer. Some abilities required to be successful in my role are ownership, collaboration, and prioritization. Some of the technical skills required are SQL, Microsoft Excel, and VBA. It is extremely important to be able to work with big data, analyze that data, and then make strategic business decisions.

## **What advice would you give to students who are considering majoring in Industrial & Systems Engineering?**

My advice to students would be to take advantage of all the opportunities Ohio State and the College of Engineering have to offer. Go to the career fairs, apply to internships through Engineering Career Services (ECS), participate in the Engineering Job Shadow Program, and get involved with engineering related organizations to grow your network. Internships are a great way to get your foot in the door with a company. Treat internships like a 10-15 week interview as they can lead to full time job offers. On another note, as more advanced technology furthers globalization, I strongly advocate for studying abroad. No matter what your major or background is, I personally think everyone should consider studying abroad. It was my favorite college experience and allowed me to view the world in a whole new perspective.
