**Positions Include:**

- Business Intelligence / Data Warehouse Manager
- SQL Server Database Administrator
- Systems Engineer
- Control Systems Engineer
- Oracle Business Analysts
- Electrical Engineer
- BI/DW Manager
- Kitting/Releasing Engineer
- Agile PLM Support
- Firmware Test Engineer
- Oracle Technical Specialist
- Global Support Manager
- Manufacturing Engineer
- Test Engineers
- Product Engineer
- Infrastructure Architect
- Infrastructure Support Engineer
- Embedded C++ Software Engineer

---

**Systems Engineer**

Involved in the specification, design, and documentation of future machine control systems. Work closely with Marketing as well as software, electrical, and mechanical engineers to ensure Trimble continues to provide high-quality products to the earth moving and paving industries.

- Strong electronics background – capable of understanding and preparing system diagrams and schematics.
- System design experience – balance of electrical, software, mechanical and practical application skills.
- Solid analytical and problem solving skills with attention to detail.
- Ability to turn market requirements into engineering specifications and other product development documentation.
- MSEE Degree.

---

**Kitting / Releasing Engineer**

Working with an international team, you will be involved in the design and release of installation parts, kits, and electronic components to support grade control on construction equipment.

- BSEE (or equivalent) with 5-8 years of experience.
- Ability to document current and define new processes.
- Ability to complete activities to meet aggressive schedules.
- Ability to lead meetings and teams to generate consensus.
- Physical ability to work on and around construction equipment.

---

**Electrical Engineer**

Designs, develops, analyzes, troubleshoots and provides technical skills during research and/or product development.

- Contributes authoritative technical expertise in a particular technical area, which can be used in multiple systems.
- Assumes leadership role in finding the expeditious resolution of critical complex technical problems.
- Makes presentations to customers and discussions of technical issues at program reviews.
- Supports the successful transition of completed products to manufacturing through planning activities such as NPI (new product introduction) product builds.
- BSEE with 3-5 years of relevant experience.

---

**Control Systems Engineer**

The control systems engineer is responsible for working with the project teams to establish product requirements and develop control system designs.

- Experience in applied controls system engineering.
- Applied and demonstrated experience in the design, implementation and validation of signal processing techniques and modern controls theory in solving real time controls system.
- Experience of MATLAB / Simulink products and / or rapid prototyping tools.
- MSEE or related discipline is required.

---

**Software Engineers and Test Engineers**

Contribute to the design, development and testing of Trimble’s Grade and Paving Control System product lines for earth moving construction and paving equipment (GCS900 and PCS900). Must have 5 years minimum software development/engineering experience with good C++ programming skills and strong linear algebra and geometry math skills. Familiar with the principles of IP programming, e.g. TCP, UDP, FTP, etc. and Linux OS.

---

**SQL Server DBA**

- Manage clustered & single instance SQL server database installations
- Design build, configure, upgrade & manage database installations
-Troubleshoot database performance issues, perform database tuning activities
- BS in Computer Science or equivalent
- 10 years’ experience in an enterprise environment, with 5 or more years as a SQL Server DBA in a production environment

---

**Oracle Business Analyst - eCommerce**

Oracle BA, with emphasis in iStore, EDI, OM, & AP modules. Responsible for the planning, analysis, design and implementation of business applications or process improvements.

- BS in Computer Science or equivalent with minimum 5 years’ experience in Oracle EDI, AP, iStore, and OM
- Provide end user support & participate in development & implementation of all future enhancements and/or projects
- Extensive experience with all aspects of Oracle 11i and/or R12
- Must have completed at least three full cycle implementations

---

**Agile PLM Support**

Responsible for support, update and maintenance of PLM system & manage Agile integration with ERP

- Day to day support of Agile PLM 9.3X system, as well as working on enhancements of the system as requested by end users.
- BS with at least 4 years’ experience in Agile Administration & minimum of 5 years’ experience in Agile PLM
- Strong PL/SLSQL knowledge

---

**BI & Data Warehouse Manager**

Hands-on responsibility for overall management & direction of BI/DW team by setting priorities, coordinating activities, & leading implementation of defined processes & standards.

- BS in Computer Science with a minimum of 7 years’ BI/DW experience (3 years’ management &/or supervisory experience required)
- Extensive experience with all aspects of Cognos BI
- Experience & knowledge of data architecture & data management concepts & methods
- Occasional international & domestic travel required (India, Europe and within US)

---

**Oracle ERP/CRM Business Analyst**

Oracle BA, with emphasis in Oracle E-Business Suite, including ERP and CRM applications

- BS in Computer Science or equivalent with minimum 5 years’ in Oracle applications with significant experience in Oracle Order Management, Inventory, Purchasing, Bills of Material, Work in Process
- At least three full cycle implementation experience in Oracle applications
- Extensive experience with all aspects of Oracle Applications 11i (Release 12 experience is a plus)
- Must be able to travel occasionally within Europe and United States

---

An exciting entrepreneurial company, with a history of exceptional growth
